SUMMARY

Backend Engineer specializing in AI-integrated systems and scalable distributed architectures. Production experience building LLM-powered backends. Experienced in designing high-concurrency systems using Go, Kafka, WebSockets, and FIX/FAST protocols to power scalable, AI-enabled platforms. Seeking Backend Engineer or AI Engineer roles focused on intelligent systems and distributed services.

TECHNICAL SKILLS

Languages: Go (Golang), JavaScript (ES6+), Python, C++, Java, HTML5, CSS3
AI / LLM: OpenAI API, Claude API, MCP (Model Context Protocol), RAG, Qdrant
Frameworks: Node.js, Gin, Echo, React.js, Next.js, REST, WebSocket (ws / Socket.io)
Databases & Messaging: MySQL, MongoDB, PostgreSQL, Redis, MariaDB, Apache Kafka (AWS MSK), RabbitMQ
Observability: Prometheus, Grafana, PromQL, Alertmanager
DevOps & Cloud: AWS (EC2, MSK), Docker, Kubernetes, Git, GitLab, CI/CD
Protocols & Other: FIX/FAST Protocol, Agora RTC SDK, SSE (Server-Sent Events)

EXPERIENCE

- Full Stack Developer** Oct 2025 – Present
Idea Usher Remote
- Engineered a production-grade real-time video calling system handling high-concurrency WebSocket connections using Agora RTC SDK, supporting live media streaming across distributed instances for 1000 users
 - Built an **MCP (Model Context Protocol) server** enabling LLM clients (ChatGPT) to autonomously query and manage multi-tenant Atlassian (Jira + Confluence) workspaces from a single chat interface — implementing **agentic workflow orchestration** across organizations.
 - Integrated Atlassian REST APIs for cross-organization workflows and implemented Clerk-based multi-tenant authentication with per-user API key isolation for secure LLM access.
 - Collaborated with EPAM Systems to build a real-time trading platform integrated via **FIX and FAST protocols**, handling full order lifecycle through a Java FIX gateway and **AWS MSK Kafka** topics with SSE-based sub-second order status updates.
- Full Stack Developer (Intern)** Aug 2024 – Mar 2025
Bobble AI Gurgaon, India
- Contributed to a modular Go service using clean/hexagonal architecture across domain interfaces, use cases, repositories, and HTTP delivery layers.
 - Built and maintained a real-time ad revenue analytics dashboard, improving reporting turnaround time by **~30%** through pipeline and query optimizations.
 - Integrated interactive React.js components for data visualization UX for key revenue metrics.
 - Integrated audience targeting microservice to fetch user preferred clusters/categories by advertising ID (GAID) and filter ads accordingly.
 - Developed scalable backend services in Golang (Echo) serving multi-million-row datasets with **sub-100ms p95** API latency under production load.

PROJECTS

- DevMind** — Go, Python/FastAPI, React.js, Qdrant, Claude API
- Building an **AI dev assistant** using **RAG** with Qdrant vector DB and Claude API streaming for context-aware, codebase-aware PR feedback and review.
 - Designed a Go-based webhook gateway to process GitHub PR/push events with HMAC verification and an async Redis-backed job queue for reliable event ingestion.
 - Implemented SQLite-backed conversational memory for persistent assistant context across sessions; integrated Claude API streaming for real-time LLM response delivery.

EDUCATION

Inderprastha Engineering College Nov 2021 – Jun 2025
Bachelor of Technology in Computer Science Uttar Pradesh, India
